

Airmiq roof cowls are designed to provide reliable, weather-resistant ventilation for both residential and commercial buildings. Each unit features a spun aluminium cowl paired with a galvanised steel tube, offering a durable and long-lasting solution for roof-mounted exhaust or relief air systems.

Both components are powdercoated black as standard for a clean, modern finish - but can also be finished in other colours to suit project requirements.

- Spun aluminium cowl and galvanised steel tube for strength and durability
- Powdercoated in black as standard
- Custom colours available
- Protects against rain ingress while allowing free airflow
- Integral bird / vermin proof mesh
- Suitable for both ducted and standalone applications
- Available in multiple sizes
- Roof flashings available (sold separately)

| SKU     | Description         | Tube Diameter | Tube Length | Overall Cowl Diameter | Overall Cowl Height | Stocked Colour |
|---------|---------------------|---------------|-------------|-----------------------|---------------------|----------------|
| VSP1042 | 150mm roof cowl kit | 150mm         | 600mm       | 230mm                 | 140mm               | Black          |
| VSP1041 | 200mm roof cowl kit | 200mm         | 600mm       | 300mm                 | 140mm               | Black          |
