

Airmiq cone diffusers are a compact and reliable ceiling-mounted solution for supply air in both residential and light commercial environments. Manufactured from high-quality ABS polymer, they are built to resist discolouration and maintain a clean appearance over time.

A manually adjustable centre cone allows fine-tuning of airflow to suit heating, cooling, or isothermal conditions. Designed for fast installation, each unit features a snap-down fixing system with spring-loaded clips, making it ideal for use in plasterboard ceiling systems.

Finished in standard ceiling white with a lightly textured surface, this diffuser is readily available and well-suited for ceiling heights up to 2.7 metres.

- Durable ABS polymer construction resists yellowing and warping
- Snap-down clip design for quick and secure installation
- Adjustable centre for airflow control
- Suitable for supply air in heating, cooling or ventilation systems
- Ideal for homes and small commercial spaces
- Multiple sizes available
